

Seamless Patient Care, with an IV Catheter that Lasts

BD Nexiva™
Closed IV Catheter System

Longer dwell times can reduce painful restarts.

Let's admit it. Few people look forward to having an IV catheter placed. Patients don't like it. Clinicians don't enjoy it. And all that is compounded when a catheter fails or has to be replaced.

Use of the BD Nexiva™ Closed IV Catheter System enables longer dwell times and clinically indicated catheter replacement.^{1*} A 2014 clinical study demonstrated that BD Nexiva™ catheters had a **median dwell time of 144 hours** for catheters in place ≥24 hours.^{1*} The same study showed that longer dwell times of closed systems led to a cost reduction of approximately \$1M/year/1,000 beds compared to an open system.¹ That's good for you and for your patients.

To order or learn about all the ways BD is caring for you and your patients, visit bd.com/INS today or call (888) 237-2762.

BD

* Compared to 96 hours with an open system.
